

Introduction

ERIS offer cable boxes as an optional extra when using larger diameter cables with our panel boards.

The cable boxes are supplied with no top and bottom gland plates but instead feature a large cut out for ease of cabling.

When being used in conjunction with a panel board, the top or bottom blanking gland plate should be removed from the panel board, drilled or cut to accept the appropriate cable and then fitted using the removed screws to the bottom or top of the cable box as required.

The rear of the cable box has 4 fixing points which allow for easy wall mounting.

Specification

Product Code	Designed To Fit	Solid Gland Plates	Dimensions (mm)			Fixing Centres	
			Height	Width	Depth	A	B
ERSSB3	ERIS 400A Panel Board	Not Supplied	355	705	155	605	255
