

Tass Cable Management along with our manufacturing Partner have tested a wide range of our products with the test reports being available on our web site at [www.floorbox.co.uk/specification-downloads](http://www.floorbox.co.uk/specification-downloads).

## Primary Load Testing

- Tass Floor boxes have been tested to comply with the current requirements of EN50085.
- The point Load test to replicate foot traffic shows a deflection of 0.38mm after 3kn load had been applied which is well within the 3.0mm deflection allowed.
- (1 Kilonewton is equal to 101.97KG).

## Installation

Installation of Floor Boxes and Floor Grommets should **not** be installed in the following situations:

1. In passage ways and or corridors where trolleys and any heavy vehicles may be used.
2. Where protruding electrical and data cables are likely to cause a trip hazard.
3. HSE consider any obstruction 10mm or higher could be considered a potential trip hazard.
4. Emergency exit routes.
5. Office desks and associated office furniture should not be positioned over Floor Grommets and Floor Boxes.
6. Where cleaning methods could result in pools of liquid being left.
